DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dobreski (5,682,730) in view of Paxton (3,417,864).

Dobreski discloses an installation and method step for manufacturing bags each of the bags having two closure strips (via 22) and a cursor (via 32) slidably mounted on said two closure strips, the closure strips and the cursor being identical between the bags, see for example (Figs. 2-5); sliding each cursor (32) along uppermost edges of the closure strips at a respective distance from one end of the closure strips (Fig. 4) with the cursor of one bag contacting the uppermost edge of at least one of the two closure strips of an adjacent bag, see for example (Figs. 3-5; via the bags in the middle of the stack, its cursor is contacting the other closure strips of the adjacent bag). Dobreski does not disclose that slidingly the cursors in such a manner that the distances are different between every two adjacent and successive bags. However, Paxton discloses a similar bags manufacturing comprising that slidingly the cursors (via closure 15) in such a manner that the distances are different between every two adjacent and successive bags, see for example (Fig. 3) to provide a flexible bag stack (column 2, lines 26-40).

Therefore, it would have been an obvious to one having ordinary skill in the art at the time the invention was made to have modified Dobreski's an installation and method step for

manufacturing bags by having slidingly the cursors in such a manner that the distances are different between every two adjacent and successive bags, as suggested by Paxton, in order to provide a flexible bag stack.
